Class Information
Section 652, Spring Term, 2001

Time and Place: M–F 9:10–10:00, Blocker 160.
Instructor: Prof. Daren Cline, Blocker 416E, 845-3181.
e-mail: dcline@stat.tamu.edu
Office Hours: Mon 3:30–5:00, Thur 2:30–4:00 (tentative) or by appointment.
Course Web Page: http://stat.tamu.edu/~dcline/652/652.html
office hours: Mon 10:00–11:30, Wed 11:00–12:00.
e-mail: hsju@stat.tamu.edu
Prerequisite: Statistics 651 or equivalent (basic one sample analyses, straight
line regression, one-way analysis of variance).
Text: L. Ott, An Introduction to Statistical Methods and Data
Analysis, 4th ed. (5th ed. ok.)
Handouts: You are also expected to purchase a booklet of handouts that
will be available at Notes-N-Quotes when the semester begins.
Homework: Will be assigned and collected regularly. Homework is worth
20% of the term score. You are encouraged to discuss your
homework with others in the class. Your solutions must be your
own, however, and no outside sources are to be used (such as
previous years' solutions or solutions manuals).

Exams: Two midterm quizzes worth 22.5% each and a final worth 35%.
All exams are cumulative and closed book. You will be allowed
to bring statistical tables and one additional page (8½ x 11) of
notes per exam.
Exam Dates: Exam I: TBA
Exam II: TBA
Final Exam: Monday, 7 May, 8-10am
Grading scale: A 85% – 100%
B 70% – 84%
C 60% – 69%
D 50% – 59%
Computer: We will use SAS software for examples and you may wish to
use it for homework. This requires access to a computer with
SAS. There are microcomputers in the Open Access Labs (such
as the one in Blocker) with PC-SAS or you may get PC-SAS
free from the Software Evaluation & Loan Library (SELL) in
1105 Computing Services Center, Teague Building (862-4104).
• If you must miss an exam due to illness or circumstances beyond your control, notify me or the Statistics department before the exam. See me immediately after to schedule a make-up exam.

• An incomplete will be given only in the event that circumstances beyond your control cause prolonged absence from class and the work cannot be made up.

Course Outline for Statistics 652

<table>
<thead>
<tr>
<th>Chapter</th>
<th>Topic:</th>
<th>concept</th>
</tr>
</thead>
<tbody>
<tr>
<td>1, 2, 20</td>
<td>Introduction:</td>
<td>uncertainty and the scientific method association and causality</td>
</tr>
<tr>
<td>9, 10</td>
<td>Regression and Correlation:</td>
<td>straight line regression model inference about SLR model transforming variables residuals diagnostics</td>
</tr>
<tr>
<td>11, 12</td>
<td>Multiple Regression:</td>
<td>polynomial regression model multiple regression model model selection criteria multicollinearity identifying outliers, influential data</td>
</tr>
<tr>
<td>13, 14</td>
<td>Analysis of Variance:</td>
<td>inference for one-way class model multiple comparison of means</td>
</tr>
<tr>
<td>15</td>
<td>Block Designs:</td>
<td>purpose of blocking randomized block designs other block designs</td>
</tr>
<tr>
<td>15</td>
<td>Factorial Designs:</td>
<td>experimental factors, interaction estimating treatment effects combining factors with blocks</td>
</tr>
<tr>
<td>17</td>
<td>Random and Mixed Effects:</td>
<td>random effects models mixed effects models variance components</td>
</tr>
<tr>
<td>19</td>
<td>Analysis of Covariance:</td>
<td>single factor and single predictor general linear model</td>
</tr>
<tr>
<td>8</td>
<td>Categorical Data:</td>
<td>goodness-of-fit tests McNemar’s test homogeneity test contingency test</td>
</tr>
</tbody>
